

## Project Title: CarShare - Carpooling application

Oscar Fennell

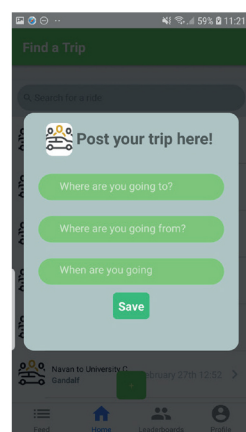

### Overview

A cross platform application developed for a final year project for Maynooth . The aim is to gamify the process of car sharing .  
*Who wants to give a ride to stranger?* - Unique point system introduced can be used as a platform to provide incentives and awards to users.

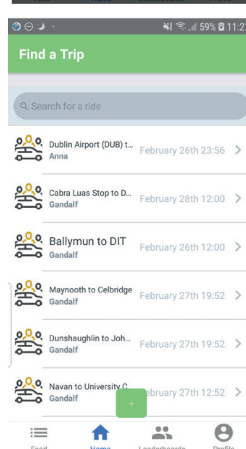

### Results

- User displayed trips - anyone can post/find a ride
- Add a trip with a simple process - built in predictions
- Points earned for every trip completed
- Can see where you are in the leadboards
- Points can be used to redeem a coffee, discount on a parking permit and more! (TBD)

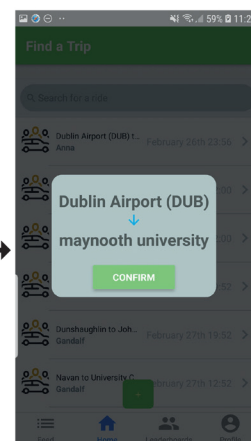

### Project

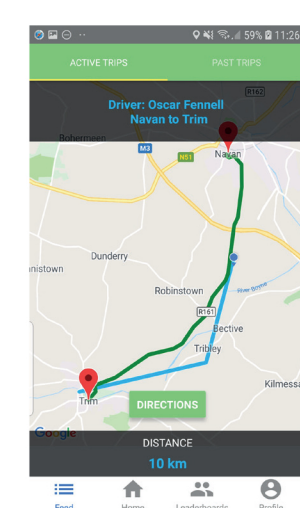

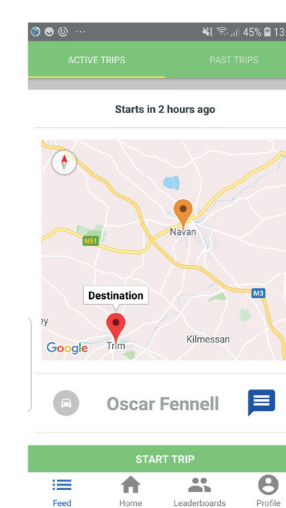

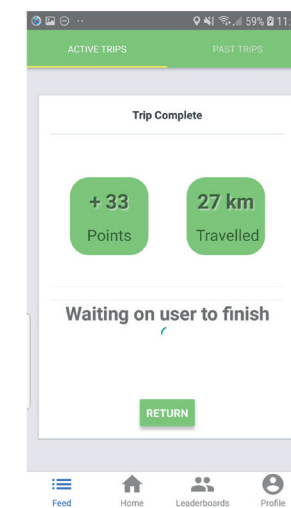

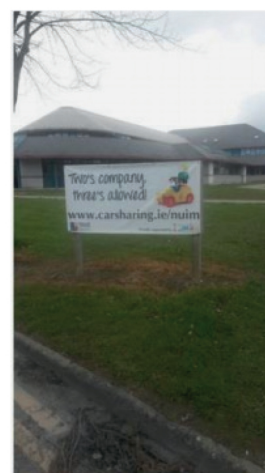

*Maynooth has the potential for car sharing*  
In a survey conducted 555 people from the university indicated they would be interested in car sharing. This app aims to encourage staff and student to car share around the campus.

### Conclusion

Carsharing is present in Ireland but is not nearly used enough. Hopefully by gamifying the process it will encourage more people to car share. An everyday person needs a push in the right direction to car pool - CarShare is a step in this direction.
