# 1. Introduction

## 1.1 Background to the Survey

In October 2016, the NTA, in conjunction with the co-operation of daa (formerly known as the Dublin Airport Authority) and Shannon Airport Authority (SAA) undertook a survey of air passengers at Dublin Airport, Cork Airport and Shannon Airport. The main purpose of the survey was to obtain essential travel data for a part of the calibration and update of the NTA's five Regional (Transport) Models System (RMS).

A similar survey of passengers at Dublin Airport was previously undertaken by the Dublin Transportation Office in 2001 as part of a study of surface access arrangements for the Airport prior to the construction of Metro North. Following on from this, in 2011, the NTA appointed Amárach Research to undertake the passenger survey at Dublin Airport. A key purpose of the previous 2011 survey was to update the 2001 data in the light of the significant changes that had occurred at Dublin Airport and the major improvements in transport infrastructure and services providing surface access to the Airport in the intervening 10 years. The Dublin Port Tunnel had opened in December 2006 and Terminal 2 began operation in October 2010.

Similarly, the 2016 survey aimed to examine how Dublin Airport, Shannon Airport and Cork Airport passengers' mode of travel and travel patterns have changed over the intervening five year period. As Ireland's busiest Airport, Dublin Airport had a passenger throughput of nearly 28 million passengers in 2016 (sum of arriving and departing passengers). The launch of Terminal 2 in 2010 has facilitated Dublin Airport with *additional* throughput capacity of over 12 million passengers per annum. Cork Airport has a passenger throughput of approximately 2 million passengers per annum, while Shannon Airport has approximately 1.5 million passengers per annum at present. See for example

<http://www.cso.ie/en/releasesandpublications/er/as/aviationstatistics2016/>

In Autumn 2016, the NTA appointed Kantar Millward Brown to undertake the passenger survey at Dublin, Cork and Shannon Airports. As was the case in the 2001 and 2011 survey, the 2016 survey was undertaken with the full co-operation and involvement of daa and Shannon Airport Authority (SAA). The Authorities worked closely with Kantar Millward Brown on the preparations for the survey, the design of the survey questionnaire and the survey pilot. In addition, daa and SAA provided all the security arrangements and personnel necessary to enable Kantar Millward Brown surveyors to have access to Airport passengers.

The 2016 survey considered the changes in the airport environment, such as the changes in the airport physical environment, increased air travel, introduction of

---

new carriers, and expansion to include both Cork and Shannon airports. For direct comparison, which can be found in the Appendix, we have compared results from November 2011 to October 2016 for Dublin Airport only.

## 1.2 Research Objectives

The main aim of the survey was to obtain concise factual information on daily and weekly travel patterns as well as data on the travel behaviour of passengers travelling both to and from Dublin, Cork and Shannon Airports.

The 2016 survey focused mainly on obtaining landside travel data with consideration given to trip origins, trip destinations, journey purpose, arrival times, departure times and travel mode(s).

The aims of the survey were to obtain:

- a. Accurate data on departing passenger's mode of surface transport (to and from each given airport) as well as geographic origin of trips
- b. Daily and weekly profiles of travel patterns to and from each given airport and hence assist in informing both the NTA and the airport authorities in planning for the current and future surface access needs of each given airport
- c. Auxiliary information on purpose of journey, car availability, vehicle occupancy, overnight stays at hotels, etc.

The research required information to be captured from two distinct types of passengers; passengers who live in the Republic of Ireland and Northern Ireland and are travelling out of the country, and passengers who reside outside of Ireland, have been in Ireland and are now returning home. The questionnaire was tailored as such.

## 1.3 Research Methodology and Sampling

As per previous studies in 2001 and 2011, it was decided that the best survey methodology to obtain this data was via direct face to face interviews with air passengers at departure gates and departure areas to ask questions about both journeys to and from the three State Airports Dublin, Shannon and Cork. All Kantar Millward Brown interviewers in the Airports are BSAT-trained and security-vetted. It was agreed with daa and SAA that all interviewers would wear their ID and ensure co-operation with any other interviewing being conducted on behalf of daa, CSO or Fáilte Ireland.

Interviews were conducted face to face by interviewers on HAPI (hand held) devices with passengers at departure gates and departure areas. Passengers in transit were excluded from the questionnaire, the script was set up to screen these

---

respondents out. It was necessary to have two separate survey versions, one for passengers who reside in the Island of Ireland, and one for those who reside outside of Ireland and are visiting the Island of Ireland. In the rest of this report, “Ireland” refers to the Island of Ireland.

For both passenger sets, the journey to the Airports were made on the same day the survey took place (although many departing passengers “overnight” in proximity to the airport, especially for very early morning flights). For the Island of Ireland residents, their return journey from the Airports would take place at a date in the future, while for those visiting Ireland, their journey from the airports took place at a date in the past.

The total sample size required was 6,000 interviews in total; 5,000 at Dublin Airport, 500 at Shannon Airport and 500 at Cork Airport. The sampling approach considered flight times, the layout of airports, gate proximity and the time available for interviewing. The sampling frame was set for interviewing to take place on Monday to Friday only, from around 7am to 7pm with some earlier interviews in Dublin airport from about 6am. Pre-7AM flights are very significant at Dublin Airport in particular, however, the purpose of the NTA survey pertains mainly to surface access travel between 7AM and 7PM. At Dublin airport we ensured that all times of the day were covered (during the survey period of 7AM to 7PM) at both terminals with interviewers at different gates. For Cork and Shannon airports, where the sample size required was much lower, we ensured a good spread of days and times of day, taking into account flights times as both airports vary from very busy to very quiet times. A detailed explanation of the sample frame is included in the appendices.

## 1.4 Questionnaire Design

The NTA provided Kantar Millward Brown with the questionnaire used in the previous research that took place in 2011. Building on the questionnaire from 2011, the NTA and Kantar Millward Brown worked together to review and amend the original questionnaire to tailor it for the 2016 survey needs. It was agreed that the 2016 survey would include a question with a pre-coded list of transport services that serve Dublin Airport, Cork Airport and Shannon Airport. Each airport had a tailored list of bus service providers; both public and private operators. The survey was also shared with daa and SAA ahead of the pilot. The questionnaire was tailored to capture both the residents of Ireland, and those visiting Ireland; the script was set up to filter respondents by Irish resident and by visitor.

In September 2016 the contents of both survey questionnaires were agreed between the NTA, daa, SAA and the survey company, Kantar Millward Brown. A copy of the final questionnaire is included in the appendix. Both the Resident and the Visitor questionnaires included the following fields:

- The origin of trips to the Airport and the destination of trips from the Airport,

*\*In the rest of this report, “Ireland” refers to the Island of Ireland*

- Flight number,

- 
- Mode of travel used, including a new question which asked if Rail travel was used for any part of the journey to the airport
  - Parking arrangements of car users
  - Number of passengers travelling together (Group size),
  - Purpose of trip abroad (Irish residents) and purpose of trip to Ireland (Non-Irish residents ‘Visitors’)
  - Date of journey from the Airport.

## **1.5 Fieldwork**

### **Pilot**

A series of pilot interviews was conducted on 19<sup>th</sup> September with travellers in Dublin Airport. The interviewers gave comprehensive feedback in terms of passenger response, questionnaire flow and overall passenger understanding of the questionnaire itself. There were some minor changes made to the questionnaire based on the pilot feedback, but overall it seemed to work very well and not cause passengers any confusion. On average the questionnaire took 7 minutes to complete. The questionnaire was then finalised by the NTA, and consequently shared with the daa and SAA, along with the sampling frame and interviewer allocations for the full October fieldwork. Interviewing schedules were shared with daa and SAA prior to the research, as well as continuous updates throughout the fieldwork.

### **Interviewer Briefing**

An interviewer briefing meeting took place on 29<sup>th</sup> September in Kantar Millward Brown office in Dublin with the airport interviewers, and the project manager from the National Transport Authority was in attendance. Interviewers received full briefing instructions and documents on sampling, approach, questionnaire details. Particular emphasis was placed on the requirements for address capture, an integral element to the research.

### **Fieldwork**

The main aim of the survey was to obtain concise factual information on daily and weekly travel patterns as well as data on the behaviour of passengers travelling both to and from Dublin, Cork and Shannon Airports. As per the information from the brief, late July and early August represent the busiest times for passenger activity at Dublin Airport. However, October and November are the busiest times in regard to general traffic movements on the road network. Consequently, the survey was conducted in October to ensure that a representative sample of passengers was captured during the busiest time for general traffic with a view to model calibration and to avoid impact of the bank holiday weekend and mid-term holidays.

The interviewing was scheduled over a three-week period, starting on Monday 3<sup>rd</sup> October, with some additional interviewing to even out the spread of interviewing days, with final interviews completed on Thursday 27<sup>th</sup> October. Interviewing at

---

both Shannon Airport and Cork Airport took place from Monday 3<sup>rd</sup> October to Monday 24<sup>th</sup> October.

Interviewing took place on Monday to Friday only. To ensure a representative sample, shift times were spread across a time range of 7am to 7pm, with a 6am start option for Dublin airport due to the number of flights early morning. Interviewers were instructed to get a mix of passenger type, i.e. Transatlantic, Regional and Continental, and interviewers in Dublin Airport were given gate ranges to target, dividing interviews across both terminals.

The following chapters of this report give the survey results separately for the three airports; Dublin, Cork and Shannon, and are broken into three categories; survey sample, main survey findings and summary of the key findings.

### **Analysis, Data processing and Weighting of data**

Once interviewing was completed a comprehensive suite of quality control checks were carried out and the data was processed by Kantar Millward Brown. This included providing respondent level data directly to the NTA for integration into their modelling database and for geo-coding. Following this, data geo-coded with longitude and latitudes was returned to Kantar Millward Brown.

As fieldwork was conducted across all hours of the day (7am-7pm) in order to capture different types of passengers, this did not take into account the total throughput of passengers at Dublin airport, and in particular how this varies across the day and day of week, by airport. Therefore, an agreed system of weights was provided by the NTA, based on actual passenger numbers by time of departure as received from the daa and SAA, averaged across a three-hour time-period and then offset by 30 minutes to take into account the time of the interview versus time of departure. These weights were agreed between the NTA and Kantar Millward Brown and applied to the data in order to ensure it was representative of travelling passengers by proportionately weighting each survey response by the estimated throughput at that time and day of week. Further details of the weighting approach are appended.

A tabular specification was then setup and data tables run with all questions being analysed by specific crossbreaks to provide the basis for this report.

## 2. Survey Sample – DUBLIN

### 2.1 Number of passengers surveyed

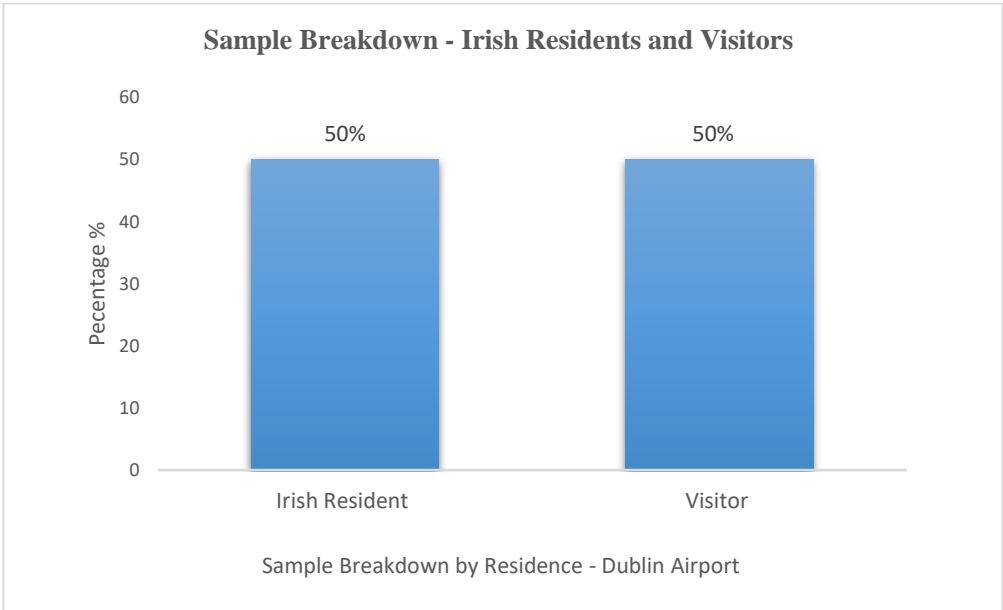

#### Number of interviews carried out by day

Figure 1.1 shows the breakdown of interviews completed by day of week, showing that 5,042 interviews were conducted in Dublin airport over the survey period.

#### Sample by Country of Residence

Figure 1.2 shows the breakdown of participating passengers by residence which was evenly distributed between Irish residents from Republic of Ireland/Northern Ireland and visitors from overseas. No quota was enforced in advance.

---

## 2.2 Sample by Country of Residence and terminal

Table 1.3 below shows the breakdown of passengers represented in the survey in both Terminal 1 and Terminal 2, and broken out by Irish resident and visitors (Non Irish residents). Interviewers were instructed to interview any passengers in the departure gates or departure areas from Ireland, both Republic and Northern Ireland, and overseas visitors, bar passengers in transit.

**Table 1.3 Passengers by residency and terminal**

The table shows that the sample fell out evenly, with the sample achieved relatively even between Irish residents with 2,533 interviews and visitors with 2,509 interviews.

Terminal	Total	%	Confidence Interval @ 95% +/-	Confidence Range %
1	3125	<b>62</b>	1.3	61 – 63
2	1917	<b>38</b>	1.3	37 – 39
Total	5042	100		
Terminal	Irish Resident	%	Confidence Interval @ 95% +/-	Confidence Range %
1	1614	<b>64</b>	1.9	62 – 66
2	919	<b>36</b>	1.9	34 – 38
Total	2533	100		
Terminal	Visitors	%	Confidence Interval @ 95% +/-	Confidence Range %
1	1511	<b>60</b>	1.9	58 – 62
2	998	<b>40</b>	1.9	38 – 42
Total	2509	100		

### 2.3 Sample by Gender and Age

Figure 2.1 shows the breakdown of all participating passengers by gender, with 48% male and 52% female.

Figure 2.2 below shows the age profile of participating passengers. This profile shows that the survey obtained a broad spread of passengers, whose age profile matches the typical profile of people travelling through the airport, with 25 – 34 year olds representing a higher proportion of those being interviewed.

**Figure 2.2 – Age profile of survey participants**

In the appendices we have included details of where in Ireland visitors and residents had travelled from on the day of the interview.

---

## 3. Main Survey Findings - DUBLIN

### 3.1 Introduction

This section summarises the main survey findings under the following headings:

- Modes of travel
- Passenger arrival and departure times and journey times to the Airport,
- Choice of bus service and rail providers
- Parking Arrangements, Drop-off and Car Availability,
- Nationality of visiting passengers (more accurately, their Country of Residence),
- Purpose of trip abroad (Irish residents) and of trip to Ireland (Non-Irish residents 'Visitors')
- Trip duration

### 3.2 Mode of travel

Table 2.1 below shows the number of passengers who travelled to the airport by each mode – broken down by Irish residents and visitors, and at a total level. Percentage mode share is then calculated and displayed, along with confidence intervals and bands.

**Table 2.1i – Total mode of travel to/from the Airport**

Mode	Total no of interviews	% of total sample	Confidence interval @ 95% +/-	Confidence Range %
Bus/Coach	1642	33	1.3	32 – 34
Taxi	1278	25	1.2	24 – 26
Passenger in Car	798	16	1.0	15 – 17
Drove own Car/Van	708	14	1.0	13 – 15
Rental Car/Van	323	6	0.7	5 – 7
Hotel Shuttle Bus	212	4	0.5	3 – 5
Motorcycle	0	0	+0.06	0 – 0.06
Bicycle	4	0	0.09	0.03 – 0.2
On Foot	9	0	0.12	0.09 – 0.34
Other (Please Specify)	69	1	0.3	1.1 – 1.7
Total	5043	100		
*totals affected by weighting ( <i>Wilson Method supplied by NTA</i> )				

**Table 2.1ii – Irish resident mode of travel to/from the Airport**

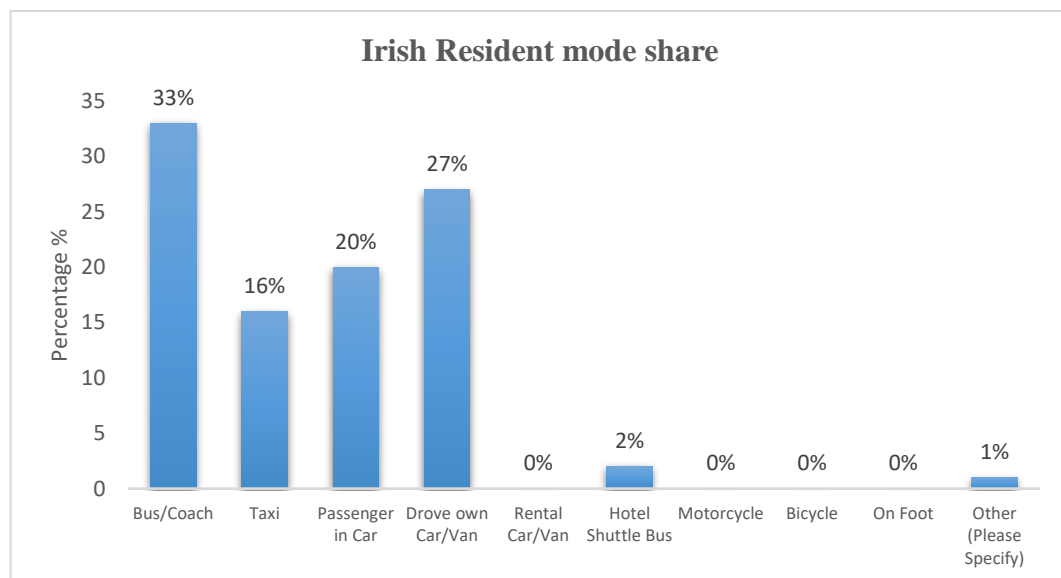

Mode	Irish Resident	%	Confidence interval @ 95% +/-	Confidence Range %
Bus/Coach	831	33	1.8	31 – 35
Taxi	406	16	1.4	15 – 17
Passenger in Car	507	20	1.6	18 – 22
Drove own Car/Van	689	27	1.7	25 – 29
Rental Car/Van	12	0	0.0	0
Hotel Shuttle Bus	49	2	0.5	1 – 3
Motorcycle	0	0	0.0	0
Bicycle	2	0	0.0	0
On Foot	2	0	0.0	0
Other (Please Specify)	34	1	0.4	1
Total	2532	100		

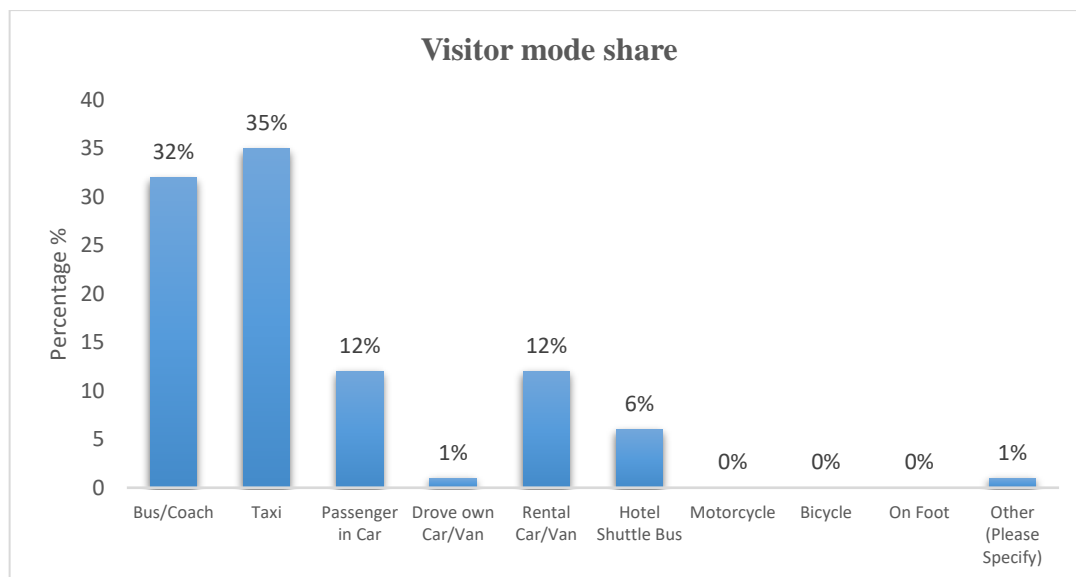

**Table 2.1iii – Visitors mode of travel to/from the Airport**

Mode	Visitors	%	Confidence interval @ 95% +/-	Confidence Range %
Bus/Coach	811	32	1.8	31 – 35
Taxi	872	35	1.9	33 – 37
Passenger in Car	291	12	1.3	11 – 13
Drove own Car/Van	18	1	0.4	1
Rental Car/Van	311	12	1.3	11 – 13
Hotel Shuttle Bus	162	6	0.9	5 – 7
Motorcycle	0	0	0.0	0
Bicycle	2	0	0.0	0
On Foot	7	0	0.0	0
Other (Please Specify)	35	1	0.4	1
Total	2510	100		

### Figure 3.1(i) – % Mode share of passengers to the Airport

Figure 3.1(i) below shows the mode share of passengers who travelled to the airport by each mode at a total level. A third (33%) travelled by Bus or Coach and 30% travelled by private car, with a quarter (25%) using a taxi.

### 3.3 Arrival and departure profiles and travel times

Figure 3.1 below gives the reported time profile of surveyed passengers arriving at Dublin Airport for both Irish residents, overseas visitors and at a total level. Please note that no interviewing was completed before 6AM or after 7PM, reflective of the periods modelled by the NTA. Again, it is important to note that one of the busier times of day at Dublin Airport is before 7AM but this was not surveyed in detail. There are other surveys carried out which may provide more accurate information on the very early morning flights, e.g., by Fáilte Ireland or daa itself. Approximately 30 flights depart from Dublin before 7AM every weekday with those passengers arriving at the airport before 6AM. Passengers surveyed around 7AM within the terminals had generally arrived between 6AM and

7AM.As such, it is important to note that this NTA survey is perhaps not highly accurate for the period outside of the survey hours.

**Figure 3.1 i– Time profile of arrivals at the Airport at total level**

**Figure 3.1 ii– Irish resident time profile of arrivals at the Airport**

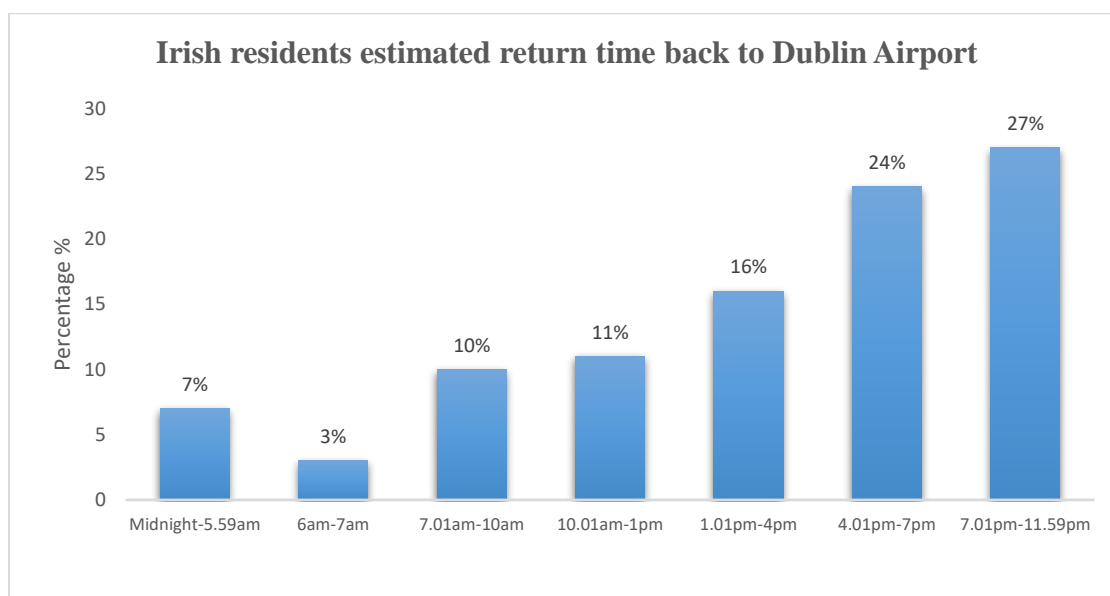

**Figure 3.1 iii– Visitors time profile of arrivals at the Airport**

Irish residents are more likely to take earlier flights before 6am than overseas visitors (13% vs 4% respectively).

### Figure 3.2i– Time profile of Irish residents return time back to Dublin Airport

Figure 3.2i shows the stated time that Irish residents expect to arrive back to Dublin Airport, with 51% expecting to arrive back after 4pm.

### Figure 3.2ii– Time profile of Visitors arrival time to Dublin Airport

Figure 3.2ii shows the estimated time that visitors arrived at Dublin Airport on their incoming journey, with 26% recalling arriving between 7-10am.

**Figure 3.3i – Journey time to the Airport**

Figure 3.3i gives the journey time to Dublin at an overall level, showing 59% travel for between 16 minutes and an hour to get to the airport.

**Figure 3.3ii – Journey time to the Airport**

Figure 3.3ii gives the journey time to Dublin Airport for Irish residents

Irish residents took longer on average to travel to Dublin airport than overseas visitors.

### Figure 3.3iii – Journey time to the Airport

Figure 3.3iii gives the journey time to Dublin Airport for visitors. 10% of residents took more than 3 hours to reach Dublin Airport; for visitors this fraction was 5%.

### 3.4 Overnight stay at hotel, B&B or hostel – Dublin

Note that in this survey, approximately 70% of departing Visitor passengers from Dublin Airport spent the previous night in a hotel, bed-and-breakfast or hostel (questionnaire responses weighted by estimated passenger volumes).. The equivalent percentage for departing Resident passengers (North or South of Ireland) was 21%. This will account in part for some of the differences in journey times to access Dublin Airport.

### 3.5 Choice of bus service provider

For the 2016 Airport Passenger Survey, we included the following Bus Service Providers for travel to Dublin Airport. The pre-coded list was developed in consultation with the NTA and listed in the questionnaire for efficiency of capturing data. Below is the list of bus options categorized into three headings; Public Service Obligation Buses, Airport Service Commercial Buses, Other Private Buses.

#### **Public Service Obligation Buses (PSO)**

Dublin Bus e.g. Route 16, 41, 102, 747

Bus Éireann e.g. Route 133

#### **Airport Service Commercial Buses**

Dublin Bus (Airlink) e.g. Route 757

Aircoach e.g. Route 700, 702, 703, 704X, 705X

Airport Hopper by Dualway e.g. Tallaght to Dublin Airport, Maynooth to Dublin Airport  
 Ard Cavan e.g. Wexford to Dublin Airport  
 City Scope e.g. Dundrum to Dublin Airport via Red Cow  
 EirEagle e.g. Galway, Limerick Service

#### Other Commercial Buses

Dublin Coach e.g. M7, N7, M9 Service  
 GoBe e.g. Cork to Dublin  
 JJ Kavanagh & Sons e.g. Route 717, 735, 736  
 John McGinley Coaches e.g. Route A  
 Wexford Bus e.g. Route 740  
 Translink e.g. Route X1, X2, X3  
 Other (to be specified by respondent, Hotel/Parking Shuttles)

**Figure 3.7 (i) (ii) (iii) – Bus service providers**

Figure 3.7 (i) – (iii) show the breakdown of passengers who travelled by bus to the airport by their choice of bus service provider, for all providers, and combined totals for Public and Private Providers for Irish residents, visitor and at a total level. Specific airport buses were used by 53% of bus users overall, 63% of visitors using the bus and 42% of Irish residents using the bus; residents using the buses are also likely to take Bus Éireann 23% or Dublin Bus 9%.

**Figure 3.8 (i) (ii) (iii) (iv) – Rail Travel**

A new question was added to the survey in 2016 to ascertain if any passengers use rail travel as part of their journey to the airport. Given that there is no direct rail access to Dublin Airport, 2% of all passengers interviewed for this survey had used rail; either DART, Irish Rail or Luas as part of their journey to Dublin Airport.

Fig 3.8(ii) displays the Rail Mode share based on those who used rail (n=95).

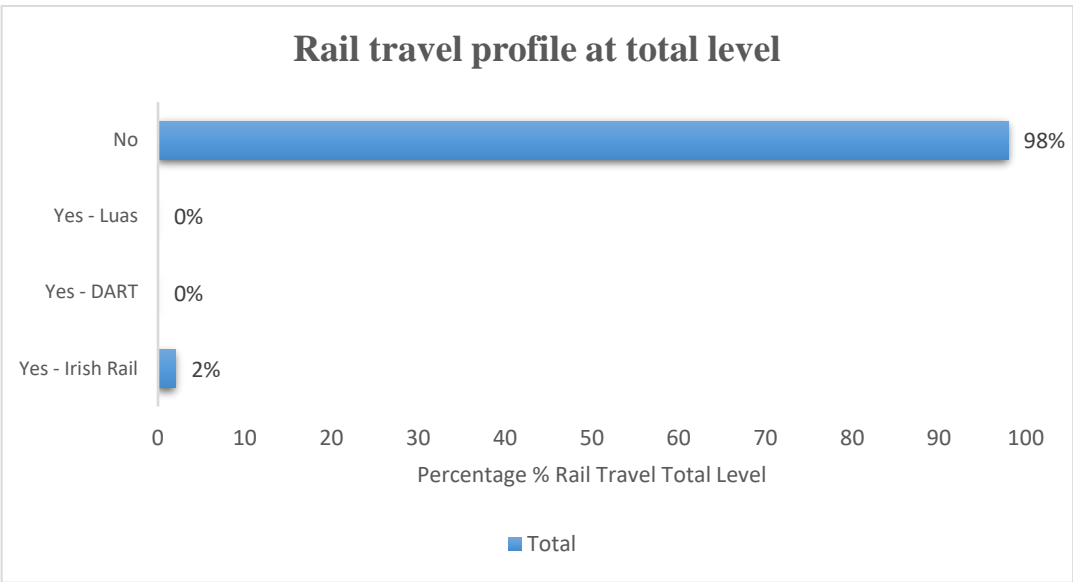

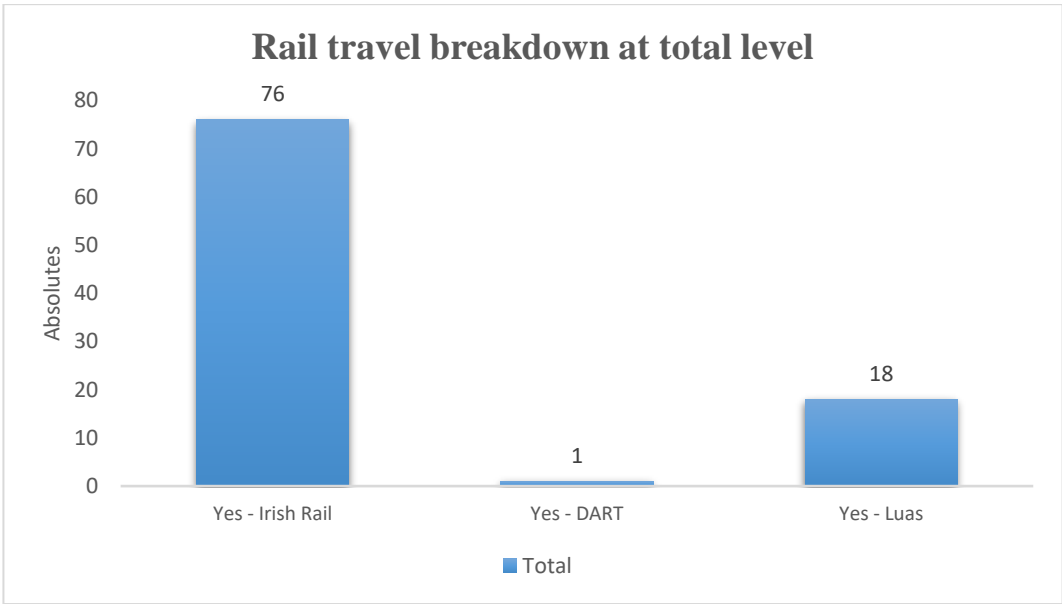

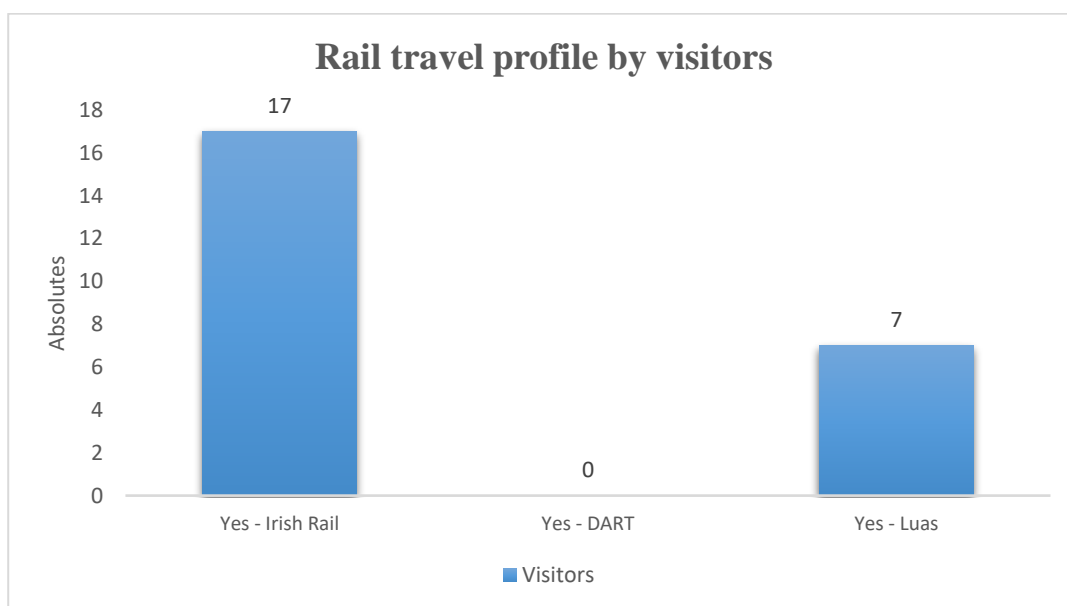

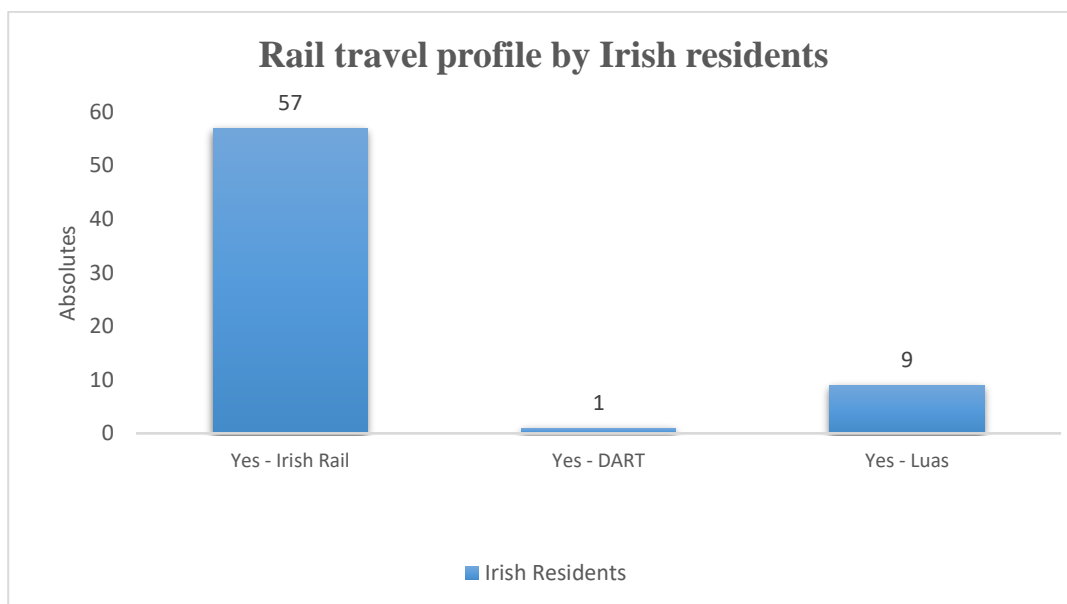

Figure 3.8 (ii)- (iv) Rail travel absolute numbers of interviews at Total Level Irish Resident Level and Visitor Level

(Based on absolute numbers of interviews n = 95 who used Rail as part of journey to the Airport.

### 3.6 Parking and Dropping off arrangements

Table 3.3 gives the breakdown of passengers who were driven to the airport as a passenger in a private car and if the driver drove away after dropping them off or if the driver parked the car and accompanied the passenger to the terminal. This question was asked of all those coded as 'Passenger in Car' at Q.8 'How did you get most of the way to the airport today?'. A quarter of Irish residents were accompanied into the terminal, compare to 8% of overseas visitors.

**Table 3.9 (i) – Private car users by those parking and not parking**

Private Car	Total	%	Confidence Interval @ 95% +/-	Confidence Range %
Drive away after dropping you?	647	<b>81</b>	2.7	78 – 84
Park the car and accompany you into the terminal?	149	<b>19</b>	2.7	16 – 21
Total	798*	100		
*totals affected by weighting				

Private Car	Irish Resident	%	Confidence Interval @ 95% +/-	Confidence Range %
Drive away after dropping you?	379	<b>75</b>	3.8	71 – 79
Park the car and accompany you into the terminal?	127	<b>25</b>	3.8	21 – 29
Total	507*	100		
*totals affected by weighting				

Private Car	Visitors	%	Confidence Interval @ 95% +/-	Confidence Range %
Drive away after dropping you?	268	<b>92</b>	3.1	89 – 95
Park the car and accompany you into the terminal?	23	<b>8</b>	3.1	5 – 11
Total	291	100		
*totals affected by weighting				

### Figure 3.9 (i) (ii) (iii) – Private car users by those parking and not parking

Figure 3.9 (i) below shows private car users parking arrangements at total level with 81% being dropped off, with 92% of overseas visitors and 75% of Irish residents being dropped off.

Figure 3.9 (ii) shows private car users parking arrangements by Irish residents.

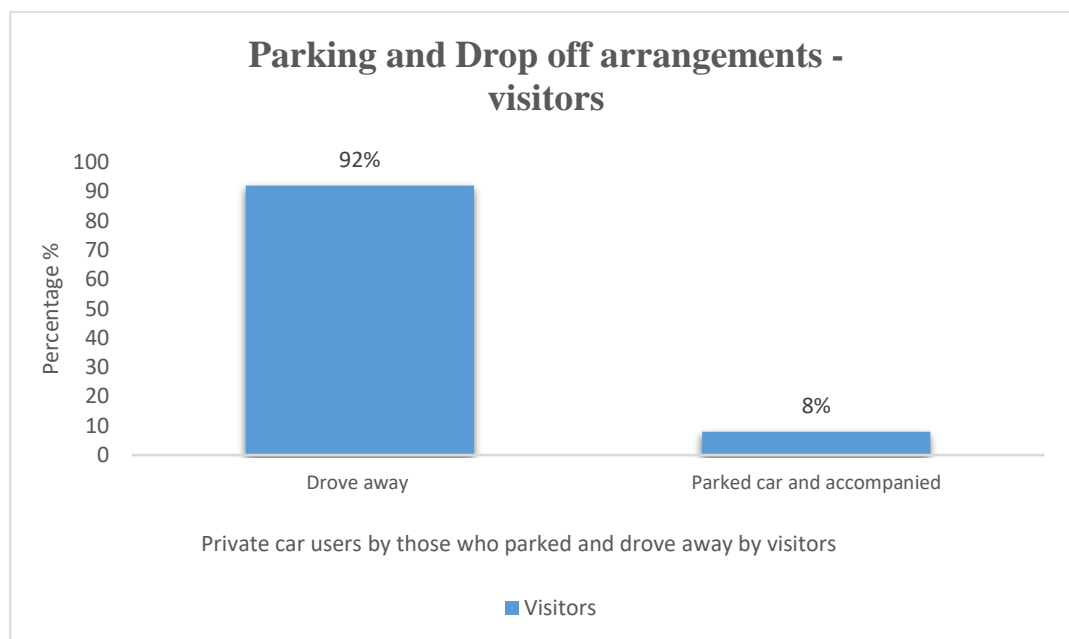

Figure 3.3 (iii) showing private car users parking arrangements by visitors.

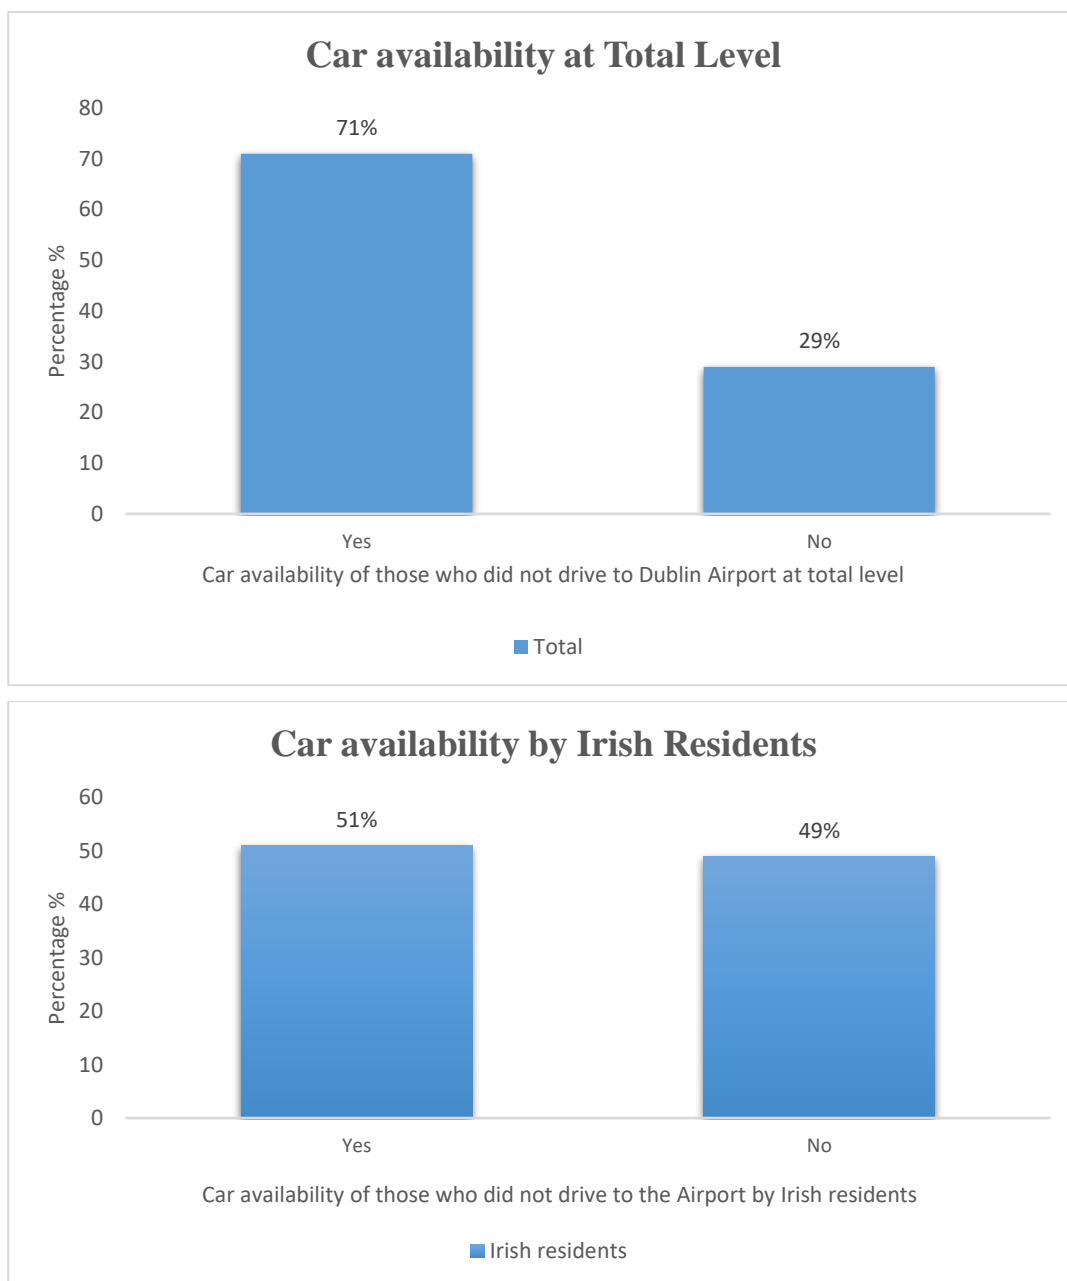

**Table 3.4 – Car Available**

For those who did not drive themselves to the airport, the table below shows if they had a car/van available to drive to the airport today, and displayed on a bar chart also. At an overall level 29% of those who didn't drive themselves had a car available, 51% for Irish residents and 12% for overseas residents. This data is instrumental for modelling purposes but may be of little general interest.

Car Available?	Total	%	Confidence Interval @ 95% +/-	Confidence Range %
Yes	3093	<b>29</b>	1.4	28 – 30
No	1241	<b>71</b>	1.4	70 – 72
Total	4334	100		
Car Available?	Irish Resident	%	Confidence Interval @ 95% +/-	Confidence Range %
Yes	937	<b>51</b>	2.3	49 – 53
No	906	<b>49</b>	2.3	47 – 51
Total	1843	100		
Car Available?	Visitors	%	Confidence Interval @ 95% +/-	Confidence Range
Yes	304	<b>12</b>	1.3	11 – 13
No	2187	<b>88</b>	1.3	87 – 89
Total	2491	100		

Figure 3.4 (i) showing Car availability of those who did not drive to the Airport.

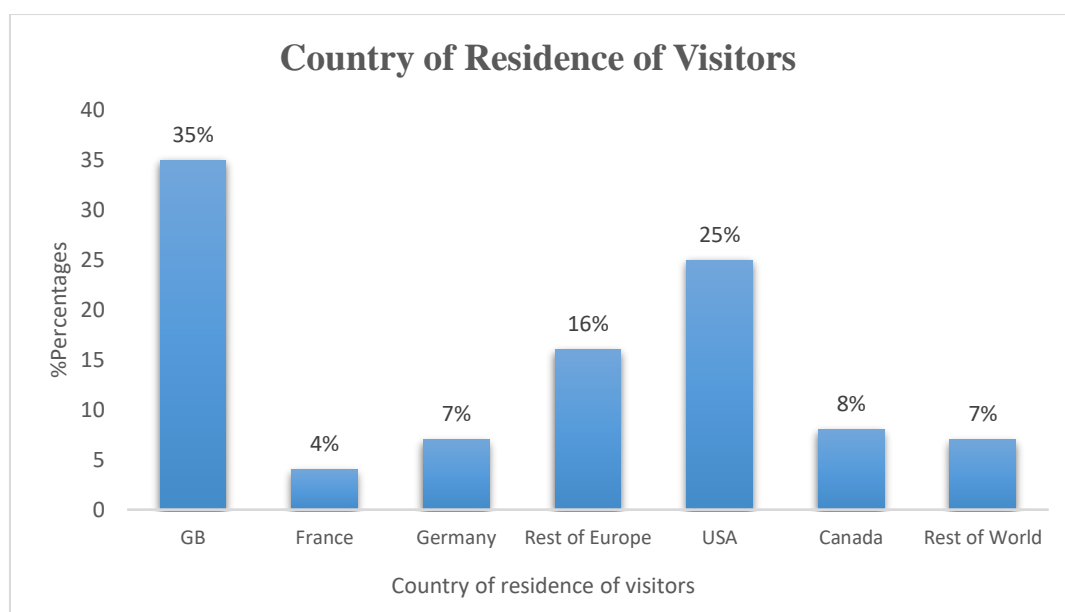

### 3.7 Nationality (Country of Residence) of visiting passengers

Figure 3.9 below gives a breakdown of the country of residence of passengers who had visited Ireland. The key European markets (Great Britain, France and Germany) are displayed and USA is second only to GB (Great Britain). We have grouped together a 'Rest of Europe' but for reference, the sample includes 2.8% Holland (i.e., the Netherlands), 1.9% Spain and 1.4% Italy. A full breakdown of visitors by country of residence is available in the appendix. [Note: this survey did not cover very early flights from 5AM – 6AM, or so, many of which are short-haul to Britain. I.e., the accurate percentage for Britain might be somewhat higher than reported here].

**Figure 3.9 Country of residence of visiting passengers**

### 3.8 Trip purpose

Table 3.5 gives a breakdown of trip purpose for Irish residents and visitors. The main purpose for both cohorts (47% Irish residents and 46% visitors) are making a trip for Holiday/Leisure, followed by Business/Work Purposes (24% and 29% respectively – which suggests more inward trade) and visiting Relatives/Family (26% and 23% respectively).

**Table 3.5 Purpose of trip abroad (Irish Residents) and trip to Ireland (Visitors)**

Trip Purpose	Total Passengers	%	Confidence Interval @ 95% +/-	Confidence Range %

\*“Other” might include, for example, attending a funeral

Figure 3.5 illustrates the trip purpose at Irish resident level, visitor level and total level.

### 3.9 Trip duration

An analysis was also undertaken of the durations of trips abroad (in the case of Irish residents) and trips to Ireland (in the case of visitors). Figure 3.11 shows the breakdown of the duration of trips abroad for Irish residents, while Figure 3.12 shows the breakdown of the duration of trips by visitors to Ireland. In October 2016 56% of Irish residents interviewed were travelling for less than a week and 71% of overseas visitors were in Ireland for less than a week.

**Figure 3.11 – Duration of trips abroad (Irish Residents)**

**Figure 3.12 – Duration of trips abroad (Visitors)**

---

## 4. Summary of Key Findings – DUBLIN

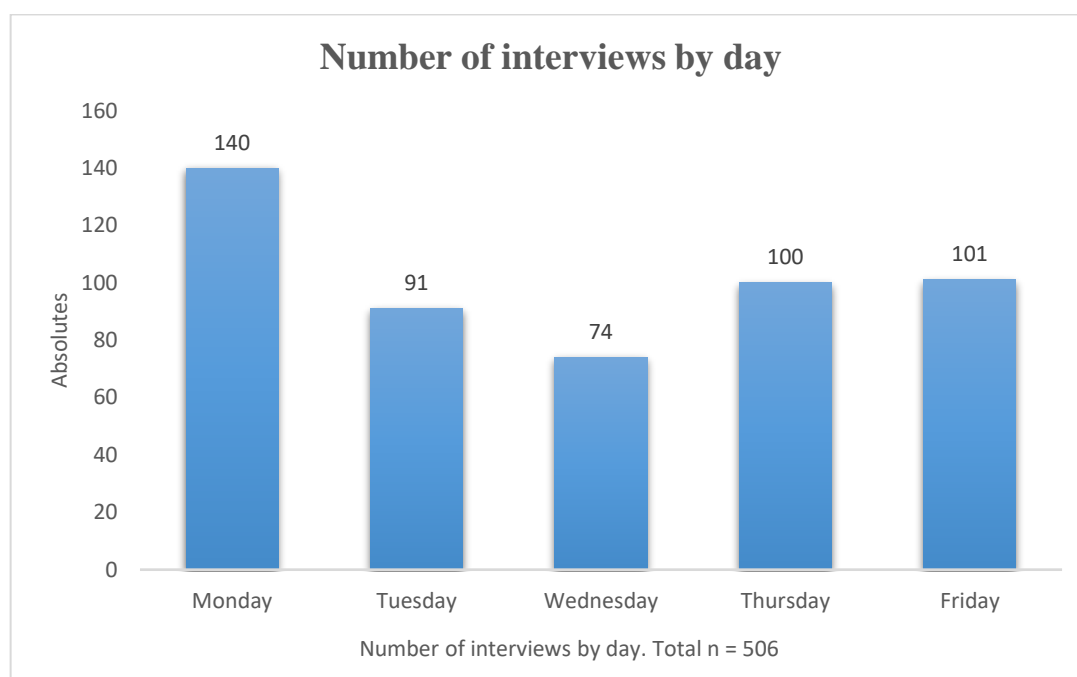

- In this research 25 – 34 year olds represented a higher proportion than other age groups in Dublin airport at 27%.
- Half of those interviewed were Irish residents and half were overseas with no quota having been enforced. The larger overseas markets were GB (35%), USA (25%), Canada (8%) Germany (7%), and France (4%).
- The main purpose of travel was holiday/leisure (47% Irish residents and 46% Visitors), followed by Business/Work Purposes (24% and 29% respectively) and visiting Relatives/Family (26% and 23% respectively).
- In terms of transport mode share used for travelling to Dublin airport, 33% travelled by bus/coach and 30% travelled by private car, with 25% using a taxi.
- Irish residents are more likely to travel to the airport by car (47%), than overseas visitors (25%), who use more taxis (35%) or bus/coach (32%).
- Among those travelling by bus, dedicated airport buses were used by 53% of bus users overall, 63% of visitors using the bus and 42% of Irish residents using the bus; residents using the buses are also likely to take Bus Éireann (23%) or Dublin Bus (9%).
- Among those travelling by private car to get to Dublin airport 81% were dropped off rather than accompanied into the terminal; with 92% of these overseas visitors and 75% of Irish residents being dropped off at the terminal.
- Of those who did not drive to the airport, 29% had a car available, 51% among Irish residents and 12% for overseas residents.
- In terms of travel time 59% travelled between 16 minutes and an hour to get to the airport. Irish residents took longer on average to travel to Dublin airport than overseas visitors. 10% of Irish residents took more than 3 hours and for visitors this figure was 5%.
- Irish residents are more likely to take earlier flights before 6AM than overseas visitors (13% vs 4% respectively).
- In October 2016, 56% of Irish residents interviewed were travelling for less than a week and 71% of overseas visitors were in Ireland for less than a week.

---

## 5. Survey Sample – Cork

### 5.1 Number of passengers surveyed

The table below shows the breakdown of interviews completed by day of week, showing that 506 interviews were conducted in Cork over the survey period.

## 5.2 Sample by nationality and departure pier

Table 5.2 shows the breakdown of passengers by Irish resident and visitors (Non Irish residents) for the survey conducted at Cork Airport. Interviewers were instructed to interview any passengers in departure gates or departure areas from Ireland, both Republic and Northern Ireland, and overseas visitors, bar passengers in transit. The survey achieved a share of 55% Irish residents and 45% visitors. No quota was enforced.

**Table 5.2 Passengers by residency – Cork**

		%	Confidence Interval @ 95% +/-	Confidence Range %
Irish Resident	277	55	4.3	51 – 59
Visitors	229	45	4.3	41 – 59
Total	506	100		

### Sample by Country of Residence – Cork

The Figure 5.2i shows the breakdown of participating passengers by residence

### 5.3 Sample by Gender and Age

The Figure 5.2ii shows the breakdown of participating passengers by gender, with 56% males and 44% females.

Figure 5.3 shows the age profile of participating passengers, 27% aged 18 – 34 years, 37% 35 – 54 years and 36% aged 55 years or older.

**Figure 5.3 – Age profile of survey participants – Cork**

---

## 6. Main Survey Findings – Cork

### 6.1 Introduction

This chapter summarises the main survey findings for Cork Airport under the following headings:

- Modes of travel
- Passenger arrival and departure times and journey times to the Airport,
- Origins of passengers travelling to the Airport – i.e. the patterns of travel,
- Choice of bus service and rail providers
- Parking arrangements of private car users
- Nationality of visiting passengers,
- Purpose of trip abroad (Irish residents) and of trip to Ireland (Non-Irish residents),
- Trip duration

### 6.2 Mode of travel and reason for mode choice

Table 5.2 shows the number of passengers who travelled to the Airport by each mode – broken down by Irish residents and visitors.

**Table 5.2 – Mode of travel to Cork Airport**

Mode	Total	%	Confidence interval @ 95% +/-	Confidence Range %
Bus/Coach	68	13	2.9	10 – 16
Taxi	94	19	3.4	16 – 22
Passenger in Car	162	32	4.1	28 – 36
Drove own Car/Van	89	18	3.3	15 – 21
Rental Car/Van	64	13	2.9	10 – 16

*Total	229	100		

**Figure 6.1 – % Mode share of passengers to the Airport**

Figure 6.1 below shows the mode share of passengers who travelled to Cork Airport by each transport mode, broken out at Irish resident level, visitor level and total level.

---

### 6.3 Arrival and departure profiles and travel times

Figure 6.2 gives the time profile of passengers arriving at Cork Airport, while figure 6.3 shows the equivalent profile for passenger trips from the Cork.

**Figure 6.2 – Time profile of arrivals at the Airport**

**Figure 6.3**

A total of 56% of incoming passengers arrive after 7pm – 50% of residents and 16% of visitors.

## Figure 6.4 – Journey time to the Airport

Figure 6.4 gives the reported estimated journey time to Cork Airport.

Approximately 4% – 5% of intending passengers reported to take more than 3 hours to travel to Cork Airport. Those who take less than 5 minutes, 2% in total, suggests they began their journey from a hotel close to the Airport.

#### 6.4 Overnight stay at hotel, B&B or hostel – Cork

Note that in this survey, approximately 66% of departing Visitor passengers from Cork Airport spent the previous night in a hotel, bed-and-breakfast or hostel (questionnaire responses weighted by estimated passenger volumes). The equivalent percentage for departing Resident passengers (North or South of Ireland) was 11%. This will account in part for some of the differences in journey times to access Cork Airport.

#### 6.5 Choice of bus service provider

Figure 6.6 shows the breakdown of passengers who travelled by bus to the Airport by their choice of bus service provider. The following Bus Service Providers were included

for Cork Airport. This list was developed in consultation with the NTA and pre coded in the questionnaire.

Bus Éireann, eg., Route 226, 226A

City Link, eg., Route 251

Other (Specify)

**Figure 6.6 – Bus service provider**

Of those who got travelled by bus (weighted n = 68), the majority of them travelled by Bus Éireann. Those who selected ‘Other’, when asked to specify, stated that they travelled by Private Coach, Aircoach or Airport Shuttle.

#### Figure 6.7 – Rail Travel

A new question was added to the survey in 2016 to ascertain if any passengers use rail travel as part of their journey to the airport.

## 6.6 Parking arrangements

Table 6.3 gives the breakdown of passengers who were driven to the airport as a passenger in a private car and if the driver drove away after dropping them off or if the

driver parked the car and accompanied the passenger to the terminal. This question was asked of all those coded as 'Passenger in Car' at Q.8 'How did you get most of the way to the airport today?'. It's interesting to note that 9% of Irish residents who were driven to Cork airport parked the car and were accompanied to the terminal, versus 25% in Dublin Airport.

**Table 6.3 – Private car users by those parking and not parking**

Private Car	Total	%	Confidence interval @ 95% +/-	Confidence Range %
Drive away after dropping you?	147	<b>91</b>	4.4	87 – 95
Park the car and accompany you into the terminal?	15	<b>9</b>	4.4	5 – 13
Total	162	100		
Private Car	Irish Resident	%	Confidence interval @ 95% +/-	Confidence Range %
Drive away after dropping you?	95	<b>91</b>	5.5	85 – 97
Park the car and accompany you into the terminal?	9	<b>9</b>	5.5	3 – 15
Total	104	100		
Private Car	Visitors	%	Confidence interval @ 95% +/-	Confidence Range %
Drive away after dropping you?	53	<b>90</b>	7.4	84 – 98
Park the car and accompany you into the terminal?	6	<b>10</b>	7.7	2 – 18
Total	59	100		

## Car Availability

Of those who did not drive themselves to the airport, the table below shows whether or not they had a car/van available to drive to the airport today, and this is also displayed on bar chart by Irish resident, visitor and total overleaf.

**Table 6.4 – Car Available**

Car Available?	Total	%	Confidence interval @ 95% +/-	Confidence Range %
Yes	147	<b>35</b>	4.6	30 – 40
No	270	<b>65</b>	4.6	60 – 70
Total	417	100		
Car Available?	Irish Resident	%	Confidence interval @ 95% +/-	Confidence Range %

Yes	140	<b>73</b>	6.3	67 – 79
No	52	<b>27</b>	6.3	21 – 33
Total	192	100		

Car Available?	Visitors	%	Confidence interval @ 95% +/-	Confidence Range %
Yes	8	<b>4</b>	2.6	1 – 7
No	218	<b>96</b>	2.6	93 – 99
Total	226	100		

### 6.7 Nationality of visiting passengers

Figure 6.8 gives a breakdown of the country of residence of surveyed passengers who had visited Ireland (generally the same as the nationality of the visitor). The key European markets Great Britain, France and Germany, are displayed in the below

graph. Fifty-four percent of the visitor sample are coming from Great Britain. While interestingly, a high proportion of respondents came from Holland (19%).

**Figure 6.8 Country of residence of visiting passengers**

Canada at 3% of visitors, is on par with visitors from the USA. For consistency, we have grouped together a 'Rest of Europe' but for reference, the sample includes Spain (1%), Belgium (1%) and Sweden (1%). However, unlike Dublin and Shannon, Holland is not included in the 'Rest of Europe' figure due to the high proportion of visitors from Holland (19%). A full breakdown of visitors by nationality is available in the appendix

## 6.8 Trip Purpose

Table 6.5 below gives a breakdown of trip purpose for Irish residents and visitors. A higher proportion of visitors are here for Business/Work versus the proportion of Irish residents travelling outbound for Business/Work, 34% and 21% respectively – which again, like Dublin Airport, may suggest more inward trade or foreign investment. The following figure represents this graphically.

**Table 6.5 Purpose of trip abroad (Irish Residents) and trip to Ireland (Visitors)**

<b>Trip Purpose</b>	<b>Total Passengers</b>	<b>%</b>	<b>Confidence Interval @ 95% +/-</b>	<b>Confidence Range %</b>
Holiday/Leisure	243	<b>48</b>	4.4	44 – 52
Business/Work	137	<b>27</b>	3.9	23 – 31

Visit Relatives/Family	59	<b>26</b>	5.7	20 – 32
To Emigrate	0	<b>0</b>	0.0	0
Other	13	<b>6</b>	4.4	2 – 10
Total	229	100		

**Figure 6.5 Purpose of trip abroad (Irish Residents) and trip to Ireland (Visitors)**

Figure 6.5 illustrates the trip purpose at total level in percentage terms and purpose percentage of Irish residents and visitors.

## 6.9 Trip Duration

An analysis was also undertaken of the durations of trips abroad (in the case of Irish residents) and trips to Ireland (in the case of visitors). Figure 3.11 shows the breakdown of the duration of trips abroad for Irish residents, while Figure 3.12 shows the breakdown of the duration of trips by visitors to Ireland. 90% of Irish residents are going on a trip up to 2 weeks, while 18% of those visiting Ireland are going for a trip of up to 2 weeks.

**Figure 3.10 – Duration of trips abroad (Irish Residents)**

**Figure 3.12– Duration of trips to Ireland (Visitors)**

---

## 7. Summary of Key Findings – CORK

- The Cork age profile is split into three cohorts: 18 – 34, 35 – 54 and 55+. 35 – 54 year olds represented a higher proportion than any other age group in Cork at 37%, followed closely by 55+ which represented 36% of the sample.
- There was no quota enforced on passenger breakdown, it was left to fall out naturally, resulting in 55% Irish residents and 45% visitors 56% males and 44% females. The largest proportion of visitors were from Great Britain (54%). Interestingly, 19% of the Cork visitor sample came from Holland, compared to 2% of Dublin sample and 0% of Shannon sample.
- The main purpose of travel for Irish residents was holiday/leisure at 59%, followed by Business/Work Purposes (21%) and visiting Relatives/Family (16%). For visitors, we see the same proportion of visitors being here for Holiday/Leisure, as we do for Business/Work (35%).
- In terms of transport mode share used for travelling to Cork airport, 50% travelled by private car, 19% by taxi, 13% by rental car and 13% by bus/coach. Irish residents are more likely to travel to Cork airport by private car (68%) than overseas visitors (27%) who use more taxis (25%), rental cars (26%) or bus/coach (19%).
- Among those travelling by bus, the majority travelled by Bus Éireann (59%) on Route 226 and 226a. One percent of the total sample used City Link. Those who selected ‘Other’ (36%), when asked to specify, stated that they travelled by Private Coach, Aircoach or Airport Shuttle.
- Ninety-one percent of all passengers who travelled in a private car were dropped off rather than accompanied into the terminal, this was the same proportion for both Irish residents and visitors. Of those who did not drive to the airport, 35% had a car available, 73% among Irish residents and 4% for visitors.
- For travel time, a similar proportion of passengers travelled to the airport in 30 minutes and under, 53% Irish residents 51% of visitors, while approximately 4-5% of intending passengers take more than 3 hours to travel to Cork airport.
- Overseas visitors are more likely to take earlier flights, with 16% of visitors arriving at the airport between 6am-7am, versus 3% of Irish residents. The busiest time periods for arrival at Cork airport is 10am-1pm, with 39% of Irish residents and 44% of visitors arriving at that time.
- In October 2016, 47% of Irish residents were travelling for less than a week, versus 76% of Visitors. Of those who travelled between 1-2 weeks, 43% were Irish residents and 18% were visitors.

## 8. Survey Sample – SHANNON

### 8.1 Number of passengers surveyed

The chart below shows the breakdown of interviews completed by day of week, showing that 527 interviews were conducted in Shannon over the survey period.

### 8.2 Sample by nationality and departure pier

Interviewers were instructed to interview any passengers in departure gates or departure areas from Ireland, both Republic and Northern Ireland, and overseas visitors, bar passengers in transit. The table below shows the breakdown of the sample in Shannon, achieving an even split between Irish residents and visitors with no quota enforced.

		%	Confidence Interval @ 95% +/-	Confidence Range %
Irish Resident	263	50	4.3	46 – 54
Visitors	264	50	4.3	46 – 54
Total	527	100		

---

## Sample by Country of Residence

The Figure 8.2 shows the breakdown of participating passengers by residence

## 8.3 Sample by Gender and Age

The Figure 8.3 shows the breakdown of participating passengers by gender.

**Figure 8.3 – Gender profile of survey participants**

### Figure 8.4 – Age profile of survey participants

Figure 8.4 shows the age profile of participating passengers

---

## 9. Main Survey Findings – Shannon Airport

### 9.1 Introduction

This chapter summarises the main survey findings under the following headings:

- Mode of travel,
- Passenger arrival and departure times and journey times to the Airport,
- Origins of passengers travelling to the Airport – i.e. the patterns of travel,
- Choice of bus service provider,
- Parking Arrangements, Drop-off and Car Availability,
- Nationality of visiting passengers,
- Purpose of trip abroad (Irish residents) and of trip to Ireland (Non-Irish residents),
- Trip duration

### 9.2 Mode of travel and reason for mode choice

Table 9.1 shows the number of passengers who travelled to Shannon Airport by each mode – broken down by ‘Total’, Irish residents and visitors.

**Table 9.1 – Mode of travel to the Airport**

Mode	Total	%	Confidence Interval @ 95% +/-	Confidence Range %
Bus/Coach	67	13	2.9	10 – 16

<b>*Total</b>	<b>264</b>	<b>100</b>		
*totals affected by weighting and rounding				

**Figure 9.1 – Mode share of passengers to Shannon Airport**

Overall, car/van is the main mode of transport for both Irish residents and visitors. A total of 83% of Irish residents travel by car to Shannon airport, either as passenger (44%) or driving their own car/van (39%), and visitors travelled by rental car/van (39%).

### 9.3 Arrival and departure profiles and travel times

Figure 9.2 gives the time profile of passengers arriving at Shannon Airport, while figure 9.3(i) and (ii) show the equivalent profile for passenger trips from the Airport, the first being the time visitors arrived at Shannon Airport on their incoming trip, and second table being the time that Irish residents are expected to arrive back to Shannon Airport.

**Figure 9.2 – Time profile of arrivals at Shannon Airport**

**Figure 9.3– Irish residents estimated return time back to the Airport**

Twenty-four percent of visitors arrive at Shannon airport between 6am-7am. The estimated return times of residents are spread quite evenly throughout the day from 10am onwards, with 20% arriving back between 7.01am-11.59pm.

**Figure 9.4 – Journey time to the Airport**

Figure 9.4 gives the journey time to Shannon Airport

Compared with Dublin (7%) and Cork (4%), for Shannon Airport 2% of passengers report their access journey taking more than 3 hours.

#### 9.4 Overnight stay at hotel, B&B or hostel – Shannon Airport

Note that in this survey, approximately 65% of departing Visitor passengers from Shannon Airport spent the previous night in a hotel, bed-and-breakfast or hostel (questionnaire responses weighted by estimated passenger volumes). The equivalent percentage for departing Resident passengers (North or South of Ireland) was 0.8%. This will account in part for some of the differences in journey times to access Shannon Airport.

## 9.5 Choice of bus service provider

Figure 9.6 shows the breakdown of passengers who travelled by bus to the Airport by their choice of bus service provider. We included the following Bus Service Providers for Shannon Airport. The list was developed in consultation with the NTA and pre coded in the questionnaire. Those who stated 'Other' travelled by private coach, or couch tour bus providers.

Bus Éireann e.g., Route 51, X51, 343

JJ Kavanagh & Sons e.g., Route 735

Other

**Figure 9.6 – Bus service provider**

## Rail Travel

A new question was added to the survey in 2016 to ascertain if any passengers use rail travel as part of their journey to the airport. No one interviewed in Shannon had used rail for any part of their journey.

## 9.6 Parking arrangements

Table 9.3 gives the breakdown of passengers who were driven to the airport as a passenger in a private car and if the driver drove away after dropping them off or if the driver parked the car and accompanied the passenger to the terminal. This question was asked of all those coded as 'Passenger in Car' at Q.8 'How did you get most of the way to the airport today?'.

**Table 9.3 – Private car passengers dropped off by those parking and not parking**

Private Car Passenger	Total	%	Confidence Interval @ 95% +/-	Confidence Range %
Drive away after dropping you?	129	<b>74</b>	6.7	65 – 79
Park the car and accompany you into the terminal?	46	<b>26</b>	6.5	19 – 33

Not applicable	0	<b>0</b>	0	0
Total*	62	100		
*totals affected by weighting				

Of the Irish resident sample, there is commonality between Shannon and Dublin in that the percentage of Irish residents who were accompanied to the terminal is 25% for both airports, while Cork is 9%.

Table 9.4 Of those who did not drive themselves to the airport, the table below shows whether or not they had a car/van available to drive to the airport today

**Table 9.4 – Car Available – Shannon Airport**

Car Available?	Total	%	Confidence Interval @ 95% +/-	Confidence Range

## 9.7 Nationality of visiting passengers

Figure 9.7 gives a breakdown of the country of residence of passengers who had visited Ireland. The key European markets are Great Britain (England, Scotland, Wales), Germany, France, are displayed in the below graph. Fifty percent of the visitor sample in Shannon are from the USA. We have grouped together the 'Rest of Europe' but for reference, the sample includes 4% Poland, 1% Italy and 2% Switzerland. A full breakdown of visitors by nationality is available in the appendix.

**Figure 9.7 Country of residence of visiting passengers, departing from Shannon**

## 9.8 Trip Purpose

Table 9.5 gives a breakdown of trip purpose for Irish residents and visitors departing from Shannon Airport. At total level, compared to Cork (20%) and Dublin (24%), 11% of passengers main purpose is to visit relatives/family.

**Table 9.5 Purpose of trip abroad (Irish Residents) and trip to Ireland (Visitors)**

Trip Purpose	Total Passengers	%	Confidence Interval @ 95% +/-	Confidence Range %
Holiday/Leisure	297	56	4.0	52 – 60
Business/Work	167	32	3.8	28 – 36
Visit Relatives/Family	56	11	2.5	8 – 14
To Emigrate	2	0	0.0	0
Other	6	1	0.8	0 – 2
Total	528	100

Total	264	100		

## 9.9 Trip duration

An analysis was also undertaken of the durations of trips abroad (in the case of Irish residents) and trips to Ireland (in the case of visitors). Figure 9.10 shows the breakdown of the duration of trips abroad for Irish residents, while Figure 9.11 shows the breakdown of the duration of trips by visitors to Ireland.

**Figure 9.10 – Duration of trips abroad (Irish Residents) departing from Shannon**

**Figure 9.11– Duration of trips to Ireland (Visitors) departing from Shannon**

---

## 10. Summary of Key Findings – Shannon

- The Shannon age profile is split into three cohorts: 18 – 34, 35 – 54 and 55+. The same proportion was made up of an even percent of 35 – 54 and 55+ (38%) each, with the remaining 24% coming from the 18-34 age group. There were slightly more males than females interviewed in Shannon.
- There was no quota enforced on passenger breakdown, it was left to fall out naturally, and like Dublin was a 50/50 split between Irish residents and visitors and 51% / 49% for males and females. The largest proportion of visitors were from USA (50%), followed by Great Britain (23%) and 10% from Germany.
- The main purpose of travel was very similar across both Irish residents and visitors. Holiday/leisure came out on top with 55% Irish residents and 58% visitors, followed by Business/Work Purposes (33% for Irish residents and 31% for visitors) and visiting Relatives/Family (10% and 11% respectively).
- In terms of transport mode share used for travelling to Shannon airport, 54% travelled by private car, 8% by taxi, 20% by rental car and 13% by bus/coach. Irish residents are more likely to travel to Shannon airport by private car, either as a passenger in car or driving themselves (83%) than overseas visitors (25%) who use more rental cars (39%) or taxis (13%) or bus/coach (11%).
- Seventy-three percent of all passengers who travelled in a private car were dropped off rather than accompanied into the terminal. Of those who did not drive to the airport, 60% had a car available, 79% among Irish residents and 48% for visitors.
- For travel time to the airport, 53% of passengers travelled to the airport in 16 minutes to 1 hour. A higher proportion of visitors had a shorter journey time to the airport versus Irish residents with 23% of visitors taking 5-15 minutes to get to Shannon airport versus 4% of Irish residents. Approximately 1-2% of intending passengers take more than 3 hours to travel to Shannon airport.
- Overseas visitors are more likely to take earlier flights, with 20% of visitors arriving at the airport between 6am-7am, versus 10% of Irish residents. The busiest time periods for arrival at Shannon airport is 10am-1pm, with 40% of Irish residents and 34% of visitors arriving at that time.
- In October 2016, 49% of Irish residents were travelling for less than a week, versus 54% of Visitors. An equal proportion of Irish residents and visitors (both 33%) travelled between 1-2 weeks.

---

## Appendices

### Appendix A Comparison with 2011 NTA Survey

This section compares 2016 Dublin Airport Survey against the 2011 Dublin Airport Survey to show how the data metrics have changed since 2011. The comparisons are shown through charts below which are broken out looking at Irish residents and visitors. The blue bars represent 2011 while the orange bars represent 2016. There are different questions between the 2011 and the 2016 survey so only metrics that are comparable are included in this section.

The following is outlined and compared

- Survey sample
  - The number of interviews broken out by day
  - Terminals used
  - Nationality of respondents
- Mode share of respondents
- Bus providers
- Private car users
- Journey time to the Airport
- Trip purpose

#### Survey sample comparison

##### Number of interviews carried out

The chart below represents the number of interviews carried out over the days of the week. In 2011 a total of 12,007 surveys were completed across two wave, and in 2016 5,042 surveys were conducted across one wave. While the 2011 sample is larger, a sample of 5,000 is statistically robust. The 2011 survey included weekends (5 days of interviewing; 3 week days and both weekend days), while the 2016 survey was designed and conducted on weekdays and excluded weekends.

## Nationality of respondents

Irish residents have increased by 1% to give a 50/50 split.

## Visitor Nationalities

Looking at the nationality of visitors, there has been a decrease in visitors surveyed from Great Britain while there has been an increase in visitors from USA (13% to 25%) and Canada (1% to 8%).

## Terminal comparison

### Irish Residents terminal comparison

As per the chart below, the terminal usage of Irish residents sees an increase in Terminal One from 57% to 64%, and a decrease in those interviewed travelling via Terminal Two.

**Visitors terminal comparison**

The terminal divide remains similar to 2011 with 60% of visitors travelling via Terminal One.

**Mode share of respondents**

**Mode share of Irish Residents**

Mode share levels remain relatively stable, however, there are small movements in the increase of Bus/Coach, decrease in use of private cars and Taxi's. Perhaps this can be

attributed to the increase of accessible bus services to the Airport? That being said, private car accounts for almost half of respondent’s mode to the Airport at 48%.

**Mode share of Visitors**

Bus and Coach remains the most used mode by visitors. Taxis have increased while the use of private cars has decreased..

**Bus providers used by respondents**

**Bus providers usage by Irish Residents**

Dublin Bus and Aircoach has decreased while the use of Bus Éireann (16% to 23%), Airlink (3% to 11%) and Other Private Buses has increased (20-27%). This finding alligns to the suggestion that Irish residents may be opting for emerging bus services to the airport.

## Bus Providers of Visitors

Dublin Bus and Aircoach has decreased by almost half, the use of Airlink has increased significantly and Other Private Buses has doubled.

## Private car users

### Private car users of Irish Residents

While the majority of Irish residents are dropped to the Airport without using the carpark, more respondents are parking and being accompanied into the airport (7% to 19%).

### Private car users of Visitors

Visitor behaviour remains stable in terms of driving and parking.

---

## Journey time to the Airport

### Journey time to the Airport at a total level

While 39% are arriving in the airport in less than a half hour, journey times overall are taking longer, with less respondents (46% down to 39% in 2016) arriving in less than half an hour and more respondents taking more than two hours to travel to the airport (13% up to 16% in 2016).

## Trip purpose

### Trip purpose of Irish Residents

There is an increase in respondents travelling for Holiday/Leisure (31% to 47%), and Business/Work (21% to 24%) while there is a decrease of visiting Family/Relatives.

### Trip purpose of Visitors

Similar to Irish residents, there is an increase of visitors travelling for Holiday/Leisure (35% to 46%), a decrease of those interviewed who are visiting Family/Relatives (36% to 23%). There has been a significant increase of 4% to 29% of visitors travelling for Business/Work.

## Number of passengers surveyed

### DUBLIN

Table A1 shows the number of passengers interviewed on each day, alongside the average group size and number of passengers represented in the survey sample on each of these days. daa figures were also provided for total passenger throughput at the airport for each day of

the surveys, giving also a calculation of the % passenger survey sample rate obtained on survey days. Interviews were conducted Monday to Friday.

**Table A1 – Passengers surveyed in Dublin**

Day	Date	Passenger Throughput	Interviews Conducted	% Sample Rate

#### INTRODUCTION

**INTERVIEWER: READ OUT**

SCRIPTER: INTRODUCTION SCREEN

Good morning/afternoon/evening. I'm \_\_\_\_\_ from Millward Brown. We are carrying out a survey on behalf of the NTA with airport passengers in departure areas and gates. The survey will take 5-6 minutes and I'd be grateful for your help in answering some questions

Q. A Are you a resident of Republic of Ireland, Northern Ireland, visiting Ireland or are you transferring between flights?

**INTERVIEWER: SINGLE CODE ONLY**

SCRIPTER: SINGLE CODE

- |                                    |                |
|------------------------------------|----------------|
| 1: Resident of Republic of Ireland | Continue to Q1 |
| 2: Resident of Northern Ireland    | Continue to Q1 |
| 3: Visiting Ireland                | Continue to QB |
| 4: In transit / transferring       | CLOSE          |

---

Q. B Where do you currently live?

INTERVIEWER: Record Country, Scroll for full list

SCRIPTER: LIST PROVIDED

FILTER: ASK QA Code 3

1. ROI	13. Austria	25. Hong Kong / Macau	37. New Zealand	49. South Korea
2. Northern Ireland	14. Brazil	26. Hungary	38. Nigeria	50. Spain
3. Eng/IoM/ Ch Isl	15. Bulgaria	27. Iceland	39. Norway	51. Sweden

- 9: On Foot
- 10: Another Flight
- 99: Other (Please Specify)

Q.18X Did you travel by Irish Rail, DART or Luas for any part of this first trip?

INTERVIEWER: MULTICODE

SCRIPTER: MULTICODE

FILTER: ALL who code 3 @ Q.A

- 1: Yes – Irish Rail
- 2: Yes – DART
- 3: Yes - Luas
- 4: No

---

Q.19X When you arrived at this Airport what was your first destination – Please provide the full address

INTERVIEWER: Record Address, Street/Road, City/Town/Village, Townland (if rural), County, Postcode (if known)

SCRIPTER: Text box

FILTER: ALL who code 3 @ Q.A

--

Q.20X How long did it take you to get the address above (approximately)?

INTERVIEWER: Record in hours and minutes in 4 digits eg. 30 minutes is 0030

SCRIPTER: New Screen. Allow 4 digits

FILTER: ALL who code 3 @ Q.A

--	--	--	--

Q. 13X When did you last fly out of this country?

INTERVIEWER: This refers to when the respondent last flew out of Ireland (North or South)  
Record Month and Year eg. April 2016 would be 0416

SCRIPTER: Allow 4 digits

FILTER: ALL who code 3 @ Q.A

1:

--	--	--	--

2: Or, never first time

---

INTERVIEWER: READ OUT: And now, finally some classification questions just to ensure we interview a broad cross section of people.

AGE: Which of these age groups do you fit into

INTERVIEWER: Record Age

SCRIPTER: Single Code

FILTER: ASK ALL

1: 18-24

2: 25-34

3: 35-44

4: 45-54

5: 55-64

6: 65+

7: Refused

RECORD TERMINAL

INTERVIEWER: RECORD TERMINAL

SCRIPTER: text box

FILTER: ALL who code 1 @ Q.AX (Dublin Only)

1: T1

2: T2

RECORD GATE OF DEPARTURE

INTERVIEWER: RECORD DEPARTURE GATE

SCRIPTER: text box

FILTER: ASK ALL

--

---

For quality control purposes, can I please ask your name and contact number or email address. Please be assured that this information will never be used for any purpose other than the verification of this interview.

INTERVIEWER: RECORD RESPONDENT NAME AND PHONE NUMBER OR EMAIL ADDRESS

SCRIPTER: text box

FILTER: ASK ALL

INTERVIEWER: Please thank respondent for participating in survey.

---

## Appendix C

### Confidence Intervals for Count data and Proportions

(This Appendix is intended for more technically-minded readers).

Count data is non-negative – e.g., the number of passengers in a sample of size  $N$  carried out over  $D$  days reporting that they travelled from Co. Donegal might be  $X$  (with  $X = 0, 1, 2, 3$ , etc.). If we segregate the total sample into  $G$  groups of counties, or local authorities, then the measured proportion of respondents from Local Authority  $i$ , is  $p_i = (X_i / N)$ , with  $\sum(X_i) = N$ , summing over all Local Authorities.  $X$  could also be the number of respondents who state that they used Taxi (or Bus, etc.) for most of their journey to reach the Airport in question, in which case  $p = (X / N)$  would represent the mode share by Taxi.

The sample count,  $X$ , in any given case, is merely one measurement in one survey where we have only sampled a very small fraction of the total passenger throughput.

When, and only when, we obtain a sufficiently large number for  $X$  (typically  $X > 25$ ) we may be able to use the “central limit theorem” to estimate a 95% confidence interval for  $X$ , thereby enabling us to assess the probable accuracy of the one single sample measurement that we have made. This is the often-quoted “margin of error”, which is given by  $p_{95} = p \pm Z_{0.025} \times \text{sqrt}[p(1-p) / N]$ , where  $p = (X / N)$  is the proportion in question.  $Z_{0.025} \approx -1.96$  is the fairly well known value of the normal variate for 2.5% probability, and  $p_{95}$  denotes the 95% confidence interval for the true proportion, based on the single measured proportion,  $p$ .

In some cases the value of  $X$  may be very small (e.g., less than 10) and the above assumption is no longer valid when computing a confidence interval. The “standard” two-sided confidence interval will usually in this case produce a negative part to the interval, which is of course meaningless.

Wilson (1927) developed a somewhat more accurate two-sided confidence interval for a sample proportion with the desirable property that it is never negative, and it has better coverage properties according to Brown, Cai and DasGupta (2001). The details below are abstracted from the following website, but is also contained in the review paper by Brown, Cai and DasGupta (2001). See:

<http://itl.nist.gov/div898/handbook/prc/section2/prc241.htm>

The Wilson method (from 1927) constructs a non-symmetric and non-negative confidence interval as follows:

Let  $p = (X / N)$  = the sample proportion for the count in question,  $X$ , with total sample size  $N$ .

---

Let  $k = z_{\alpha/2} = -Z_{(1 - \alpha/2)}$  = standard normal variate such that the area to the left of  $k$  equals  $\alpha/2$ . With  $\alpha = 0.05$  (95% confidence),  $k = -1.959964$ . For algebraic convenience, let  $a = k^2 / (2N)$ ;  $b = k^2 / (4 N^2)$  and  $c = 1 + (k^2 / N)$ .

The Upper Limit, UL, of the Wilson interval is:

$$UL = [ p + a - k \times \sqrt{[p(1 - p)/ N] + b} ] / c$$

The Lower Limit, LL, of the Wilson interval is:

$$LL = [ p + a + k \times \sqrt{[p(1 - p)/ N] + b} ] / c$$

## Appendix D

## Airport Catchment (not weighted)

N.B. dots indicate geo-location of survey participants but should only be taken as approximately indicative of passengers' origins on day of departure.

---

## Appendix E

### **Trip Rates to each State Airport for Residents by County / Local Authority**

(The “error bars” in the charts below indicate a 95% confidence interval for the estimated trip rate in each case).

Having collected and processed the respondent data from the State Airport Survey for 2016, the NTA has combined this information with the estimates for normally resident population from Census 2016. For residents of Northern Ireland the same exercise has been undertaken using estimates for the populations of the six counties, in order to give an all-island estimate of (a) trip-making, and (b) catchment areas for Dublin, Shannon and Cork Airports, respectively.

It may be worth re-iterating that the survey pertains to October 2016 and the charts below relate to respondents who stated that they are / were Resident in Ireland (including either the Republic of Ireland or Northern Ireland). Note also that a fraction of respondents spent the prior night at a hotel and therefore their Origin may not quite accurately reflect their county of residence. This nuance may be dealt with in subsequent analysis and reporting by the NTA.

**Residents: Population-based Average Weekday  
Trip Rate per 100,000 to Dublin Airport (approx)**

Figure R1: estimated weekday number of trips made to Dublin Airport per 100,000 of population from each county and Local Authority. The black lines indicate a 95% confidence interval for each rate, independently.

## Appendix F

### Weighting Dublin

Weighting was applied to survey responses by time-of-day and day-of-week.

As departing passengers were surveyed approximately uniformly and randomly through the day, then their responses should be weighted proportionately to the passenger volumes around that time of day, and also day of week, because a proportionate number of like passengers were \*not\* sampled.

For Dublin the weighting applied was TABLE 3 below assuming a 30 minute time-lag for interview to departure. For interest, we have included the full weighting options developed by the NTA

			Weight by Day of Week	0.2157	0.1777	0.1824	0.2016	0.2226
Sub-total Hours	744547		Total by Day:	160603	132269	135839	150115	165721

Dublin Table 3: Weights based on Time of Interview, with time-lag to departure							
Count backwards time-lag from interview to flight departure							
. E.g., 30 minutes - half still in this depart hour and half in next depart hour							
Time-lag =		-30 minutes					
Interpolate using Table 2:							
0	Time of Interview	Monday	Tuesday	Wednesday	Thursday	Friday	Sub-total Hours
1	00:00 - 00:59	0.0002	0.0000	0.0004	0.0000	0.0004	0.0011

14-Hour Weighting Dublin: Hour-of-Interview, Kepler-Averaged over PAX.  
Midnight - 1AM = 0

## Cork Weighting

For Cork, Table 4 below was used for weighting, assuming 30 minute time-lag from interview to departure. Weighted for 13-Hour Survey and zero outside 7AM to 8PM at Cork.

For interest, the rest of the weight options have been included below

			Weight by Day of Week	0.2758	0.1796	0.1467	0.1985	0.1993

### Shannon Weighting

For Shannon, Table 4 below was used for weighting, assuming 30 minute time-lag from interview to departure. Weighted for 11-Hour Survey and zero outside 7AM to 6PM at Shannon.

For interest, the rest of the weight options have been included below

		Weight by Day of Week	0.2261	0.1566	0.1790	0.1875	0.2508
Sub-total Hours	35207	Total by Day:	7961	5513	6302	6600	8831
