OVERVIEW

Campus Carpool is a student-focused app mock-up designed to make commuting easier, cheaper, and more sustainable.

By connecting students with similar routes and schedules, the app simplifies carpooling while reducing traffic congestion, transport costs, and carbon emissions.

With a clean, eco-friendly design and built-in safety features, Campus Carpool makes shared travel more convenient and reliable for college students.

HOW IT WORKS

- **I'm Driving** – Offer a ride by selecting this mode. Let others know you have seats available and are heading in the same direction.
- **Looking for a Lift** – If you need a lift, choose this option to find drivers offering rides along your route.
- **Find People** – Match with students based on location and schedule. This feature connects you with others who are also looking to share a ride.
- **Previous Trips** – Keep track of your past rides for future reference. This helps you see how often you've carpoled and track your savings and impact.
